

Use Case Name	Create Periodic Supplier Order (e)
Textual Description	The system automatically places orders for all products scheduled for delivery the next day, in quantities that ensure stock will be above minimum after delivery.
List of Actors	System Manager, Supplier (Mock)
Pre-conditions	- At least one product exists with a defined delivery day - The product's minimum stock level is defined - The product has supplier cost data registered
Post-conditions	- For each product scheduled for tomorrow, an automatic order was placed with the cheapest available supplier
Main Success Scenario	1. System Manager enters tomorrowDay into the system 2. System checks all products scheduled for tomorrowDay 3. System places orders and presents details to System Manager 4. Supplier (Mock) receives the orders 5. Process ends
Alternatives/Extensions	2a. No products scheduled for tomorrowDay → System notifies System Manager, process ends 2.1a. No supplier data exists → System notifies System Manager, skips to next product

Pseudo Code:

1. System Manager enters tomorrowDay into the system
2. FOR EACH product in system:
 - IF product.deliveryDay == tomorrowDay:
 - qty = max(targetQuantity, minStock - currentStock + 1)
 - 2.1 System presents order details to System Manager
 - 2.2 Supplier (Mock) receives the order
 - ELSE:
 - skip to next product
3. Process ends
