

Use Case Name	Create Automatic Order on Shortage (f)
Textual Description	When a warehouse worker updates stock and the total falls below the minimum threshold, the system automatically places an order with the cheapest supplier.
List of Actors	Warehouse Worker, Supplier (Mock)
Pre-conditions	- The product exists with a defined minimum stock level - The product has supplier cost data registered
Post-conditions	- An automatic order was placed with the cheapest supplier for the product in shortage
Main Success Scenario	1. Warehouse Worker enters productId, warehouseAmount, shelfAmount 2. System checks stock level 3. System presents shortage alert to Warehouse Worker 4. System presents order details to Warehouse Worker 5. Supplier (Mock) receives the order
Alternatives/Extensions	1a. Product id does not exist → System displays error, process ends 2a. Stock is sufficient → Process ends, no order placed 2b. No supplier data exists → System notifies Warehouse Worker, no order placed

Pseudo Code:

1. Warehouse Worker enters productId, warehouseAmount, shelfAmount

2. IF product.totalStock <= product.minStock:

2.1 System presents shortage alert to Warehouse Worker

2.2 System presents order details to Warehouse Worker

2.3 Supplier (Mock) receives the order

3. ELSE:

Process ends, no order placed
