

Operation: checkAndProcessPeriodicOrders(tomorrowDay: int)

Cross References: Use Case: Create Periodic Supplier Order (e)

Preconditions:

- tomorrowDay is an integer between 1 and 7
- At least one product exists with a defined delivery day and supplier cost data

Postconditions:

- For each product whose deliveryDay matched tomorrowDay, an automatic order was created (instance creation)
- Each order was associated with the cheapest supplier for that product (association formed)
- Each order quantity was set to $\max(\text{targetQuantity}, \text{minStock} - \text{currentStock} + 1)$ (attribute modification)
